

# Federal Financial Aid Satisfactory Academic Progress Appeal

Harley ‘Ryott’ Glayzer

June 2025

## Introduction

I previously submitted an appeal for financial aid in December 2023. That appeal was necessary because I had failed many of my classes and had an especially low GPA. I am still recovering from this low GPA, and have raised it to the level of "Good Academic Standing" as of the end of this previous semester, Spring 2025. In this appeal, I will include verbatim my prior "Circumstances" section. Thereafter, I will review the plan that I set in place in December 2023, and evaluate both its effectiveness and my performance in sticking to that plan. After that, I will discuss some struggles that I have come across since that first appeal, how I have handled them, and what I can do going forward. Finally, I will set forth my current academic plan.

## Circumstances: Then and Now

In my past semesters, I have struggled academically due to several limiting factors that affected my performance. These factors ranged from being out of my control to being completely in my control. However, I feel that I am now more apt to maintain satisfactory academic progress. I have mitigated these limiting factors to the point that I feel comfortable managing them. I will outline three factors outside my control and one factor within my control that have hindered my academic performance.

**My Struggle with Homelessness** To begin, I have experienced homelessness since I started school at SD Mines. Until I met my now wife, I was living on friend's couches and in my truck. This, in addition to the other circumstances to be outlined later, made it rather difficult to complete assignments and maintain satisfactory academic progress. It also made it difficult to attend lectures and classes. Now, I still live in a vehicle. However, that vehicle is a bus that is outfitted with access to electricity, water, and internet. I have been able to complete work tasks from my Lab Assistant position under Dr. Schnee on the bus without many barriers. In this regard, I plan to be very open and upfront with my professors, advisor, and Dr. Joe with any changes in my living situation. If I end up in a situation without access

to electricity or internet, I plan to use my cubicle in the Dakota Building as a workspace to get all of my assignments done before I head home for the night.

**My Struggle with Physical Disability** Another limiting factor to my academic progress has been my struggle with chronic illness and disability. I have been diagnosed with Ehler's-Danlos Syndrome, Hypermobile Type: a connective tissue disorder that causes chronic, debilitating pain in my joints; frequent joint dislocations and subluxations; chronic fatigue; intense digestive issues; problems with postural orthostatic tachycardia (dizziness and passing out when standing up); incontinence; and many other symptoms that may occur, but I haven't dealt with yet (such as organ prolapse, intense bruising, miscellaneous heart problems and other internal organ issues). In the past, I have had intense flare-ups that have kept me in bed (wherever that would be) for up to days at a time. Recently, I have been making it a point to take care of my health and manage flare-up triggers. This includes exercising more, learning when to take a break from physical activity, some self-care routines, and doing what I can to eat healthier. This has been aided by my acceptance into the SD SNAP Benefits program, the work of physicians at Oyate Health and beyond, and my choice to commute by bike (which seems to be the only exercise I can do without worsening my physical condition). I can neither expect nor profess that I will not have another flare-up. I still have minor flare-ups that require me to take more Ibuprofen than is healthy. However, I can state my plan concerning managing my disability and its effects on my academic progress. I am working closely with the ADA coordinator to obtain the best accommodations for my Ehlers-Danlos Syndrome, which may include lectures/slides/notes available on days that I may not be able to attend class, and possibly attending lectures over ZOOM. I am also doing everything I can to take care of myself and my body, and listening to its special needs. I currently take the city bus part way and bike the rest of the way to Mines for my position as a Lab Assistant under Dr. Schnee and reside in my cubicle in the Dakota Building every day. Having this "home base" where I can do work and biking around campus (rather than walking) has greatly improved my ability to manage flare-ups and get work done at the same time. I cannot predict or change when flare-ups happen, but I can better communicate with my professors, advisor, and ADA coordinator when they do.

**My Struggle with Severe ADHD** A factor that has also led to my past unsatisfactory academic progress is my severe ADHD going untreated. ADHD is often viewed as an excuse, or as trivial. However, to those who struggle with the effects of severe ADHD, its effects on executive function are tangible in poor academic performance and disorganization in all areas of life, which often leads to other debilitating circumstances. Until recently, I had lost medical insurance and had no access to ADHD medication. This inhibits my ability to organize my thoughts and thus my life. This had a part in my struggles to turn in assignments and focus on the tasks at hand. Now, I am medicated through Oyate Health and have state medical insurance. Since starting medication, I have seen significant improvement in my ability to get work done efficiently and thoroughly while keeping focus. This has applied to all of the steps that I have done to get back into SD Mines, as well as the work that I do as a Lab Assistant under Dr. Schnee. As an aside, I have been medicated throughout the tour that I went on in Fall 2023, and was able to maintain the same level of getting work

done as being in the office. This would not have been possible at any earlier, unmedicated point in my life. The tour would have proved itself to be a great distraction that kept me from getting any work done. I plan to continue my medication indefinitely, as well as work closely with the ADA coordinator on accommodations to benefit me. Even though I have proven to thrive in an environment where programming is a core part of tasks, I have often struggled with the online assignment structures that are now commonplace in our university. This stems from the struggles of focus and organization that are only exacerbated by the dopamine-centric internet (ADHD is on some level a dopamine deficiency). To help with this, I am trying to get as many assignments as I can on paper. I feel that this will help eliminate any issues I have after medication for my ADHD. All in all, I feel that medication and upfront communication with the ADA coordinator, my professors, and my advisor are key steps in my plan to manage my ADHD.

**My Struggle with Maturity** To be frank, I have struggled with maturity. I came to SD Mines after skating through high school on test scores alone. I was immature and dumb in many ways. As time goes by, I am learning and maturing in my way. Having to attempt to pay for my classes has taught me that I was taking my aid for granted. Financial aid is a privilege and an enormous help for students like me, who frankly likely couldn't make it without aid. I neglected my aid by not working closely with the ADA, not communicating my housing struggles with resources at the school, who I'm sure would have helped me in some regard there, and by not being proactive in my academics. That neglect was the result of blatant immaturity and I can recognize that now. I can also recognize where situations are out of my control. However, I can also recognize where I can be more proactive in those situations and help others help me. I feel that I have matured significantly since I lost my financial aid and that I am mature enough to handle the responsibility that comes with it. I am steadfast in my intentions to continue maturing and learning.

## Plans: Going Forward in Academia and Reviewing My Progress

In the previous section, I outlined a few plans for how I am going to manage my limiting factors regarding academic performance. In this section, I will expand upon those plans.

**Transportation and Attendance** I plan to continue utilizing my bicycle and public transportation to attend classes. On days when the trip is too much on a bike, I will either use my truck or solely public transit. I plan to use mobility aids as necessary. I own a walker and a cane and am working on obtaining an ambulatory wheelchair. If I cannot attend a class or lecture, I will notify my professors, my academic advisor, the ADA coordinator, and Dr. Joe by email as soon as I have the opportunity. In that case, I will follow through with whatever suggestions or plans are set in place by my ADA plan and the discretion of the professor.

Since December 2023, I have continued to use my bicycle, public transport, and my truck to attend classes. I could have done better with communicating my attendance needs in the

last two semesters, and that is something that I will continue to work on.

**Student Work** I feel that my work as a Lab Assistant under Dr. Schnee has positively impacted my performance and work ethic. I plan to continue working under Dr. Schnee as a Lab Assistant while taking courses.

Since December 2023, I have continued working under Dr. Schnee while taking courses. I feel that this has allowed me to apply the things I'm learning and to learn things that I otherwise wouldn't. Working under Dr. Schnee has been overall beneficial and I plan to continue to do so going forward.

**ADA Accommodations** In the past, I have neglected to take full advantage of the accommodations afforded to me by the Americans with Disabilities Act. This has led to poor communication and not receiving the help I need. I plan on working closely with the ADA coordinator and my professors to ensure positive academic performance even through my struggles with disability.

Since December 2023, I have better taken advantage of ADA accommodations in order to aid me in my academic endeavors. I feel that this is reflected by my rise in GPA. I will continue to utilize the ADA accommodations I necessitate.

**Tutoring** In past semesters, I have neglected to utilize the tutoring available at SD Mines, due in part to attendance issues, and part to ego. I have realized that not seeking help because of ego is pointless and dumb. I plan on utilizing the tutoring programs available to the full extent I need.

Since December 2023, I have sought tutoring when I felt I needed it, mainly for CHEM 112. I have also reached out to peers and professors about questions I have had in class. This has positively impacted my academic performance, and I plan to continue utilizing tutoring in my future semesters.

**Health** I plan on continuing all medication I am currently prescribed, as well as regularly attending and scheduling doctor's appointments. I plan on following all suggestions set forth by my physicians and specialists. I will let appropriate people know when I must miss class due to a medical appointment. I plan on continuing to do what I can to eat and live healthy, and be honest and ask for help when I can't. I will be transparent and upfront about any issues that arise regarding my academic performance because of my health.

Since December 2023, I have continued my medication as I have been able (There was a brief Adderal shortage). I have had medical issues come up at least once a semester which impacted my ability to perform well in school. These impacts have been the greatest in my two physics lab classes, since I had to be present to take data. I feel that I have improved my communication relating to my health, but there is definitely still room to improve. After the medical episodes, I have worked with professors to catch up on missed work.

**Communication** I have often struggled with communication in all facets of life. However, I feel that I am learning and growing in my communication skills. I intend to continue working on those communication skills by being upfront and proactive in my emails with my professors, advisor, ADA coordinator, and all other necessary parties. I feel that I have shown tangible improvements in this regard which can be observed through my emails.

Since December 2023, I have improved on my communication. However, I still feel that this is one of my weaker skills. I plan on continuing to work on improving my communication with professors, classmates, and administrators.

**Credits and Classes** Through experience, I have seen that I have a hard time handling the full 15-hour course load that is common for students in my major. I intend to take somewhere between six and twelve credits each semester, depending on classes available and the workload of courses. I have discussed this with my academic advisor, Michael Dowding. Currently, I am registered for MATH 125 (Calc II) and CHEM 112/L (General Chemistry) for Spring 2024, and plan on taking PHYS 211/L and MATH 225 in the Fall.

Since December 2023, I have improved my GPA enough for the registrar's office to consider me in good academic standing. Below, I have included a table of my courses since my last appeal, credits, and grades. The lower portion of the table includes my future classes that I plan to take.

## Conclusion

Overall, I feel that I am ready to be eligible for federal financial aid. If medical documentation is desired, it can be provided. However, there may be a wait time on the part of the medical offices in regard to medical release forms.

<b>Semester</b>	<b>Course</b>	<b>Class Name</b>	<b>Credits</b>	<b>Grade</b>
Spring 2024	CHEM112	General Chemistry I	3	B
Spring 2024	CHEM112L	General Chemistry I Lab	1	A
Spring 2024	MATH125	Calculus II	4	A
Summer 2024	ENGL101	Composition	3	A
Fall 2024	LAK133	Lakota Language I	3	A
Fall 2024	MATH225	Calculus III	4	B
Fall 2024	MUS117	Jazz Ensemble	1	A
Fall 2024	PHYS211	University Physics I	4	B
Fall 2024	PHYS211L	University Physics I Lab	1	F
Spring 2025	LAK233	Lakota Language II	3	A
Spring 2025	MUS117	Jazz Ensemble	1	B
Spring 2025	PHYS213	University Physics II	4	C
Spring 2025	PHYS213L	University Physics II Lab	1	WD
Spring 2025	PHYS225	Vibrations, Waves, & Optics	3	C
Summer 2025	MATH321	Differential Equations	3	~
Fall 2025	MATH381	Introduction to Probability & Statistics	3	~
Fall 2025	MUS117	Jazz Ensemble	1	~
Fall 2025	PHYS331	Introduction to Modern Physics	3	~
Fall 2025	PHYS341	Thermodynamics	2	~
Fall 2025	PHYS343	Statistical Physics	2	~
Spring 2026	MATH315	Linear Algebra	3	~
